PROJECT

PLEASANT TOUR

- Pleasant Tour is a frontend web project designed for the travel and tourism industry. The main purpose of the project is to help users explore various travel destinations and make informed decisions about their trips. It provides users with information about different tour packages, destinations, accommodation options, and booking details, offering a seamless and enjoyable experience for potential travelers.

E-BOOK

- E-book is a web application designed for users to browse, purchase, and download eBooks. The platform provides a seamless experience for book lovers, allowing them to access a wide variety of books online. Built using PHP and MySQL for backend functionality and modern frontend technologies for the user interface, this project focuses on creating a user-friendly, efficient, and secure environment for ebook management and distribution.
